

HAYER & BOECKER

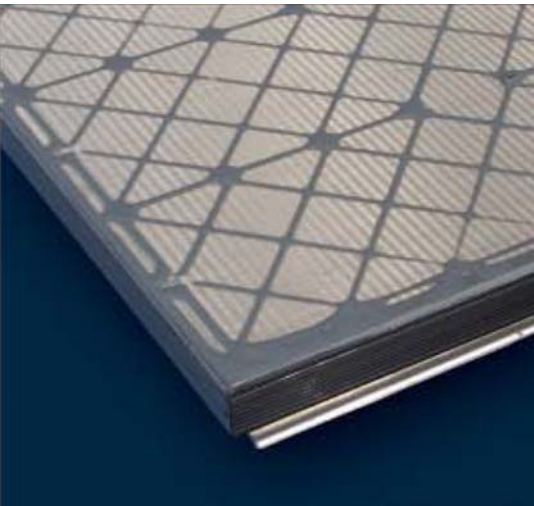

Information

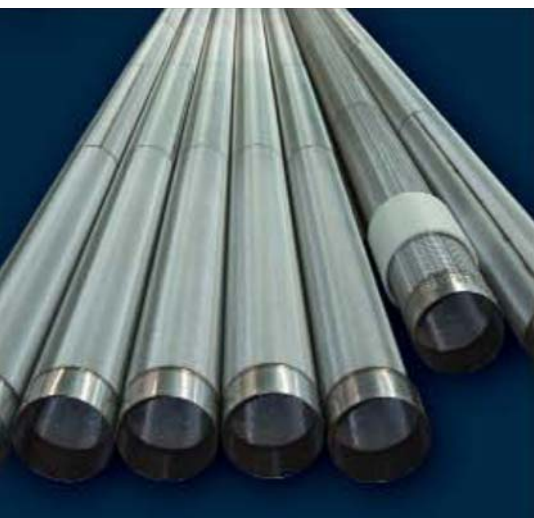

**Oilfield Screening
Products**

Hook strip formats of NEXTweave Shaker Screens for all major brands of Shale Shaker.

Pretensioned formats of NEXTweave Shaker Screens for VSM 100 and VSM 300 and for all other major brands of Shale Shaker.

Sand Control Screens used during well completions made from Diffusion bonded Filtration Media „POROSTAR“

HAVER & BOECKER

The Future of Oilfield Screening

What we do:

Solids Control - Shaker Screen Products

Shaker Screens are used during the well construction phase of every drilling project and in conjunction with the Shale Shaker are the first line of defense in solids removal from the drilling fluid system. Using patented mesh technology our products deliver reliable solids removal capability combined with high fluid processing rates and outstanding operational life.

Sand Control - POROSTAR Premium Screen Products

Sand Control Screens used during well completions are a high stakes, high risk component of any completion. If the screens do not perform, severe problems can occur in downstream equipment that can ultimately lead to the failure of the completion.

Haver & Boecker can help you minimize your risk by providing high quality, tight tolerance filtration mesh and associated products that deliver dependable filtration properties to your completion.

Haver & Boecker

is a world leader in the design and manufacture of Fine and Ultra-Fine woven wire mesh technology that goes beyond the traditional products available today. Haver & Boecker specializes in designing your products around your application to ensure that you get performance you can rely upon.

KEY GOALS

- Manufacture high quality, high accuracy woven wire mesh products for oilfield applications
- Provide product in raw cloth form or in finished assemblies.
- Employ the latest filtration and separation industry technology
- Increase total performance, decrease total cost

For quality, durability and performance you can depend on Haver & Boecker
